

Behind an excellent design
there is a project, a
goal, an ideology ready to
unveil its story.

Arx

Arx

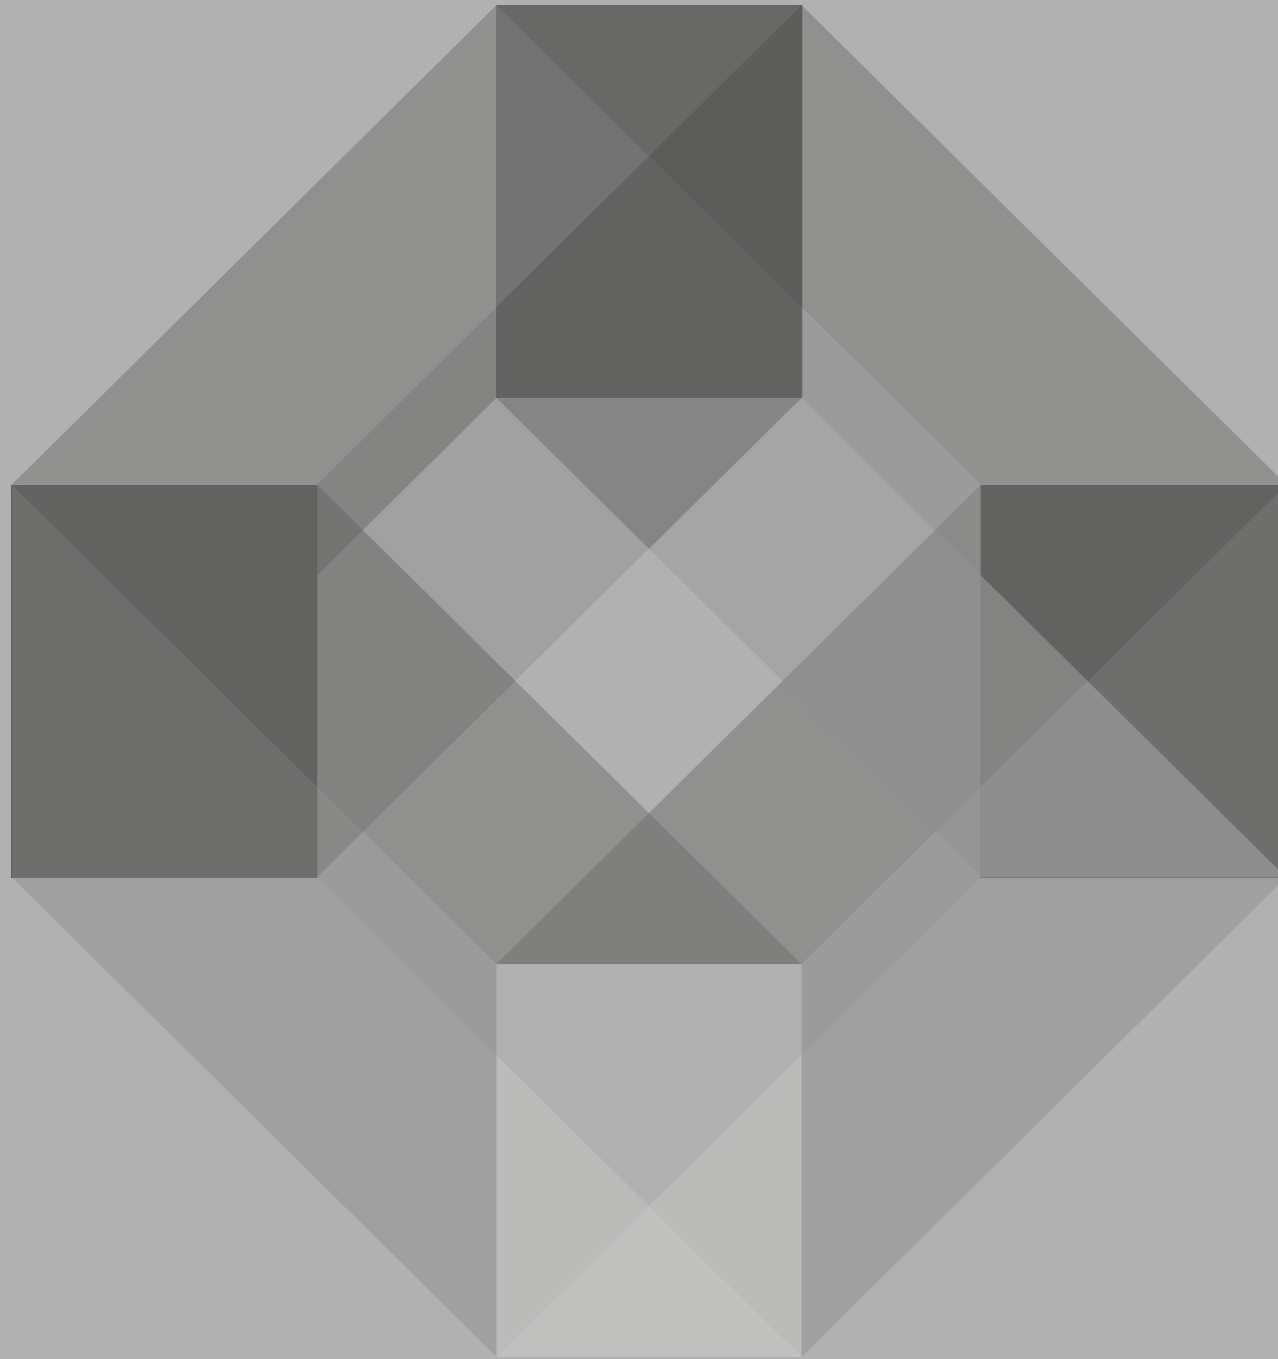

Fase1

Fase1

The most typical mark of Italian style lies at the heart of its endeavour to create elegant, measured aesthetics, always adjusted to the characteristics and purpose of the object itself. Thought takes shape: without useless effects, but filtering beauty through the beacon of intelligence.

The technical innovation of German design brings to life objects and accessories that are effective and precise. They are the results of ongoing studies and research of the highest expression of functionality. Everything comes together in the high-level user experience, governed by one unique, great concept: reliability.

EXCLUSIVE DESIGN

Functional, elegant, original. These are the 3 characteristics that determine Arx's design and give life to its most important components, like its exclusive coplanar door handles.

TAILOR-MADE

Thanks to the hinges with a capacity up to 200kg and to the engineering of the door, Arx can achieve a single opening that measures up to 1300x2700 mm.

CUSTOMIZABLE

From wood to metal, from concrete to lacquer finishes: Arx and its components can be customized with any of the multiple finishing touches available.

PERFORMANCE

Its exceptional weather-proof sealing performance is possible thanks to a wise combination of materials and to its 100 mm wide thickness.

CYLINDER

The best of Swiss precision: the incredible technology of 22 hardened steel hinge pins arranged in 4 symmetric rows grants 1 million operational cycles, as well as a protection against the most advanced door-breaking techniques.

KEY

Its duplication is possible only with the "matrix" card containing the duplication codes. With Arx you have a guarantee that your key is unique in the world.

DOOR LOCK

It is built in stainless steel, with revolutionary hooks that automatically lock when the door is closed; it is therefore impossible to forget to lock the door.

TECHNOLOGIES

Arx is at the frontline in selecting advanced optional systems such as: smart door locks with touchscreen, fingerprint readers, transponders or even smartphone apps with access control!

Total

Fesel

Total

Total

Arx

Fesel

Total

The door to another world: the study of Arx's design converges in the overall alignment of all its components. The 'Total' model represents its maximum expression.

Fasel

Fasel

‘Total’ distinguishes itself because of its exclusive door handle that follows the entire height of the door, blending beauty with functionality. Furthermore, a useful and breathtakingly designed night light is available upon request.

Zero

Fasel

Zero

Arx

Fasel

‘Zero’ is dedicated to the lovers of simplicity: its stainless steel handle occupies the smallest possible amount of space, with zero protuberances.

Arx is absolute linearity: to preserve its pure beauty, even in the presence of a glass sidelight there are no interruptions to its design flow.

Slide

Arx

Faseel

Slide

Arx

Faseel

Original and unexpected: 'Slide' hides the door lock cylinder within the door handle, unveiling it only when needed.

Design your own door
by choosing from the
numerous alternatives.

Arx is the result of a wise union of different materials: all our know-how is enclosed within this 100mm-wide door, which offers an unprecedented insulation of the inside from the outside.
